ACKNOWLEDGMENTS

110th Annual Edition

Glenn W. King, Chief, Statistical Compendia Staff, was responsible for general supervision and compilation of this volume under the direction of **Marie Argana**. **Lars B. Johanson** was responsible for technical supervision and coordination. Assisting in the research and analytical phases of assigned sections and in the developmental aspects of new tables were **Rosemary E. Clark**, **Rachael LaPorte-Tomcik** and **Edward C. Jagers**. The latter two were also responsible for content and preparation of graphics. **Geraldine W. Blackburn** and **Pauline G. Oden** provided primary editorial assistance. Other editorial assistance was rendered by **Georgia E. Braley**, **Dolores M. Roberson**, **Marjorie M. Sproesser**, and **Mary Sherwood-Bulmer**.

The cooperation of many contributors to this volume is gratefully acknowledged. The source note below each table credits the various government and private agencies which have collaborated in furnishing information for the **Statistical Abstract**. In a few instances, contributors have requested that their data be designated as subject to copyright restrictions, as indicated in the source notes to the tables affected. Permission to use copyright material should be obtained directly from the copyright owner.

January 1990

SUGGESTED CITATION

U.S. Bureau of the Census, *Statistical Abstract of the United States: 1990*
(110th edition.) Washington, DC, 1990

For sale by Superintendent of Documents, U.S. Government Printing Office,
Washington, DC 20402, Tel. (202) 783-3238.

Preface

The *Statistical Abstract of the United States*, published since 1878, is the standard summary of statistics on the social, political, and economic organization of the United States. It is designed to serve as a convenient volume for statistical reference and as a guide to other statistical publications and sources. The latter function is served by the introductory text to each section, the source note appearing below each table, and Appendix I, which comprises the Guide to Sources of Statistics, the Guide to State Statistical Abstracts and the Guide to Foreign Statistical Abstracts.

This volume includes a selection of data from many statistical publications, both governmental and private. Publications cited as sources usually contain additional statistical detail and more comprehensive discussions of definitions and concepts than can be presented here. Data not available in publications issued by the contributing agency but obtained from unpublished records are identified in the source notes as "unpublished data." More information on the subjects covered in tables so noted may generally be obtained from the source.

Except as indicated, figures are for the United States as presently constituted. Although emphasis in the *Statistical Abstract* is given primarily to national data, many tables present data for regions and individual States and a smaller number for metropolitan areas and cities. Appendix II, Metropolitan Area Concepts and Components, presents explanatory text, a complete current listing and population data for metropolitan statistical areas (MSA's) the primary metropolitan statistical areas (PMSA's), and the consolidated metropolitan statistical areas (CMSA's). Table 36 in section 1 presents selected population characteristics and number of households for MSA's with population of 250,000 or more. Statistics for the Commonwealth of Puerto Rico and for outlying areas of the United States are included in many State tables and are supplemented by information in section 30. Additional information for States, cities, counties, metropolitan areas, and other small units, as well as more historical data, are available in various supplements to the *Abstract* (see inside back cover).

USA Statistics in Brief, 1990, the pocket-size loose insert in front of the book, is available separately. Price and ordering information can be obtained from U.S. Bureau of the Census, Customer Services, Washington, DC 20233 (telephone (301) 763-4100). A 25 percent discount will be allowed on orders of 100 copies or more sent to the same address.

Changes in this edition.—Subject matter content changes include presentation of data from the 1987 Economic Censuses where available and the 1987 Census of Agriculture. We will continue to expand our statistical series in these areas in the 1991 edition. Among the other areas for which we have introduced new material are deaths from AIDS, registered nurses, school enrollment projections by State, pet ownership, finances of Political Action Committees, child care, employment projections, cost of living indexes, the financial condition of insured commercial banks, employee drug testing, mergers and acquisitions, airline on-time arrivals and departures, and corporate farming.

A special feature has been introduced which organizes in one area summary data available on the growth of computer technology in the office environment (see page 943).

We have briefly reviewed the comments sent to us as a result of the user questionnaire in our last edition and are incorporating several modifications to our presentation as a result of user suggestions. We have restyled the Table of Contents to be more like the original version. It presents major sub-sections within sections to guide users to given statistical areas. For those who found the list of new tables beneficial, we have included it as an Appendix along with tables deleted from the 1989 edition. Several commented that they would like to see more explanation on how to interpret the unit indicators presented in the tables. We have broadened our presentation of the Guide to Tabular Presentation to include this information. Changes in future editions will reflect results of more detailed analysis of questionnaire responses.

Statistics in this edition are generally for the most recent year or period available by the fall of 1989. Each year almost 1,500 tables and charts are reviewed and evaluated; new tables and charts of current interest are added, continuing series are updated, and less timely data are condensed or eliminated. Text notes and appendixes are revised as appropriate.

Historical statistics.—Specific headnote references in this *Abstract* link many tables to earlier data shown in *Historical Statistics of the United States, Colonial Times to 1970*. (See Appendix IV, pp. 933 and 934.)

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in the forthcoming *State and Metropolitan Area Data Book, 1990*.

Statistical reliability and responsibility.—The contents of this volume were taken from many sources. All data from either censuses and surveys or from administrative records are subject to error arising from a number of factors: Sampling variability (for statistics based on samples), reporting errors in the data for individual units, incomplete coverage, nonresponse, imputations, and processing error. (See also Appendix III, pp. 918–932.) The Bureau of the Census cannot accept the responsibility for the accuracy or limitations of the data presented here, other than for those which it collects. The responsibility for selection of the material and for proper presentation, however, rests with the Bureau.

For additional information on data presented.—Please consult the source publications available in local libraries or write to the agencies indicated in the source notes. Write to the Bureau of the Census only if it is cited as the source.

Suggestions and comments.—Users of the *Statistical Abstract* and its supplements (see inside back cover) are urged to make their data needs known for consideration in planning future editions. Suggestions and comments for improving coverage and presentation of data should be sent to the Director, U.S. Bureau of the Census, Washington, DC 20233.

¹ Includes publicly owned vehicles. Excludes military services' vehicles. ² Includes taxis. ³ Includes standard equipment.

⁴ From immediate prior year. ⁵ Excludes motorcycles. ⁶ Estimate.

Source: Registrations—U.S. Federal Highway Administration, *Selected Highway Statistics and Charts*, annual; sales—Motor Vehicle Manufacturers Association of the United States, Inc., Detroit, MI, *MVMA Motor Vehicle Facts and Figures*, annual.

Headnotes immediately below table titles provide information important for correct interpretation or evaluation of the table as a whole or for a major segment of it.

Footnotes below the bottom rule of tables give information relating to specific items or figures within the table.

Unit indicators show the *specified quantities* in which data items are presented. They are used for two primary reasons. Sometimes data are not available in absolute form and are estimates (as in the case of many surveys). In other cases we round the numbers in order to save space to show more data, as in the case above.

EXAMPLES OF UNIT INDICATOR INTERPRETATION FROM TABLE 1029

Year	Item	Unit Indicator	Number Shown	Multiplier
1988	Car registrations	Millions...	140.7	1,000,000
1988	Sales	Thousands.....	7,105	1,000

To Determine the Figure It Is Necessary to Multiply the Number Shown by the Unit Indicator:

Car registrations = $140.7 \times 1,000,000$ or $140,700,000$ (almost 141 million).

Sales = $7,105 \times 1,000$ or $7,105,000$ (over 7 million).

When a table presents data with more than one unit indicator, they are found in the column headings or spanner (shown above), stub (table 14), or unit column (table 70). When the data in a table are shown in the same unit indicator, it is shown in boldface as the first part of the headnote (table 2). If no unit indicator is shown, data presented are in absolute form (table 1).

Parallel vertical rules indicate that the components which follow add to the total or, in the case of percents, rates, and ratios, their underlying data add to the total. In the above illustration, retail sales of passenger cars in 1988 were 10,626,000 (10,626 "in thousands") which equals the sum of domestic sales 7,526,000 (7,526 "in thousands") and imports 3,100,000 (3,100 "in thousands") are shown.

Heavy vertical rules are used to separate independent sections of a table, as shown above, or in tables where the stub is continued into one or more additional columns (table 4).

Averages. An average is a single number or value that is often used to represent the "typical value" of a group of numbers. It is regarded as a measure of "location" or "central tendency" of a group of numbers.

The *arithmetic mean* is the type of average used most frequently. It is derived by summing the individual item values of a particular group and dividing the total by the number of items. The arithmetic mean is often referred to as simply the "mean" or "average."

The *median* of a group of numbers is the middle number or value when each item in the group is arranged according to size (lowest to highest or vice versa); it generally has the same number of items above it as below it. If there is an even number of items in the group, the median is taken to be the average of the two middle items.

Per capita (or per person) quantities. A per capita figure represents an average computed for every person in a specified group (or population). It is derived by taking the total for an item (such as income, taxes, or retail sales) and dividing it by the number of persons in the specified population.

Index numbers. An index number is a measure of difference or change, usually expressed as a percent, relating one quantity (the variable) of a specified kind to another quantity of the same kind. Index numbers are widely used to express changes in prices over periods of time but may also be used to express differences between related subjects for a single point in time.

To compute a price index, a base year or period is selected. The base year price (of the commodity or service) is then designated as the base or reference price to which the prices for other years or periods are related. Many price indexes use the year 1982 as the base year; in tables, this is shown as "1982=100." A method of expressing the price relationship is:

Price of a set of one or more items for related year

Price of the same set of items for base year

The result multiplied by 100 provides the index number. When 100 is subtracted from the index number, the result equals the percent change in price from the base year.

Average annual percent change. Unless otherwise stated in the *Abstract* (as in Section 1, Population), average annual percent change is computed by use of a *compound interest formula*. This formula assumes that the rate of change is constant throughout a specified compounding period (one year for average annual rates of change). The formula is similar to that used to compute the balance of a savings account which receives compound interest. According to this formula, at the end of a compounding period the amount of accrued change (e.g., school enrollment or bank interest) is added to the amount which existed at the beginning of the period. As a result, over time (e.g., with each year or quarter), the same rate of change is applied to a larger and larger figure.

The *exponential formula*, which is based on continuous compounding, is often used to measure population change. It is preferred by population experts because they view population and population-related subjects as changing without interruption, ever ongoing. Both exponential and compound interest formulas assume a constant rate of change. The former, however, applies the amount of change continuously to the base rather than at the end of each compounding period.

When the average annual rates are small (e.g., less than 5 percent), both formulas give virtually the same results. For an explanation of these two formulas as they relate to population, see U.S. Bureau of the Census, *The Methods and Materials of Demography*, vol. 2, 3d printing (rev.), 1975, pp. 372-381.

Current and constant dollars. Statistics in some tables in a number of sections are expressed in both current and constant dollars (see, for example, table 690, section 14). Current dollar figures reflect actual prices or costs prevailing during the specified year(s). Constant dollar figures are estimates representing an effort to remove the effects of price changes from statistical series reported in dollar terms. In general, constant dollar series are derived by dividing current dollar estimates by the appropriate price index for the appropriate period (for example, the Consumer Price Index). The result is a series as it would presumably exist if prices were the same throughout, as in the base year—in other words as if the dollar had constant purchasing power. Any changes in this constant dollar series would reflect only changes in real volume of output, income, expenditures, or other measure.

State Rankings

[When States share the same rank, the next lower rank is omitted. Because of rounded data, States may have identical values shown, but different ranks]

DIVISION AND STATE	RESIDENT POPULATION ¹

- Represents zero. X Not applicable. ¹ See table 688, 1990 Statistical Abstract. Source: U.S. Bureau of the Census. ² See table 1404, 1990 Statistical Abstract. Source: U.S. Bureau of Economic Analysis.

³ See table 1312, 1990 Statistical Abstract. Source: U.S. Bureau of the Census. ⁴ See table 1394, 1990 Statistical Abstract. Source: U.S. Bureau of Economic Analysis. ⁵ See table 1370, 1990 Statistical Abstract. Source: Market Statistics, New York, NY. (Copyright). ⁶ Total U.S. exports amounted to \$322,225 million in 1988. However, only the \$235,956 shown could be allocated by state of origin.

Telephone Contact List

To help *Abstract* users find more data and information about statistical publications, we are issuing this list of contacts for Federal agencies with major statistical programs. The intent is to give a single, first-contact point-of-entry for users of statistics. These agencies will provide general information on their statistical programs and publications, as well as specific information on how to order their publications.
